I have got the following code from a book but it doesn't seem to work. Any suggestions? private void button1_Click(object sender, EventArgs e) { int rowIndex = (int)dataGridView1.CurrentRow.Index; int columnIndex = (int)dataGridView1.CurrentCell.ColumnIndex; string itemText = dataGridView1.Rows[rowIndex].Cells[columnIndex].Value.ToString(); // Update item text in a cell of

the grid `dataGridView1.Rows[rowIndex].Cells[columnIndex].Value = itemText;` } A: First, you must update the value of your grid by changing the `itemText`. Then you need to refresh the whole data table.

```
private void button1_Click(object sender, EventArgs e) { int rowIndex =  
    (int)dataGridView1.CurrentRow.Index; int columnIndex =  
    (int)dataGridView1.CurrentCell.ColumnIndex; string itemText =  
dataGridView1.Rows[rowIndex].Cells[columnIndex].Value.ToString(); // Update item text in a cell of  
    the grid dataGridView1.Rows[rowIndex].Cells[columnIndex].Value = itemText;  
dataGridView1.Refresh(); } Using the Patient Quality Index to provide a quality measure for hospital  
services. Quality of care has become an important issue in health care, and measures for measuring  
quality are needed. A new measure was developed, using information from administrative and clinical  
sources and incorporating patient satisfaction data. The "Patient Quality Index" (PQI) is described,  
including validation, and used in this paper to provide a quality measure for hospital services. A new  
measure of quality of care was developed and validated 2d92ce491b
