executed by simply double-clicking on the file.Q: update in mysql without column name? I am trying to update data in mysql
database but the update query is with column name.I don't know the name of the column I have to use it.Is there any way to do
this? A: You can't. If you are asking whether you can provide the table name in your update statement, then no, because you
need the table name for a SELECT statement, but not an update statement.
