The aim of this study was to investigate the clinical features and outcomes of children managed in the middle and lower east of England. An audit was performed of the clinical features and management of all children with cleft palate managed in a regional centre for cleft palate from 1st October 2011 to 31st March 2015. Forty-eight children (26 males and 22 females) were identified as having cleft palate managed in the centre with a median age of 12.3 months (range 1.2-60.7 months). There were 29 patients with non-syndromic cleft palate and 19 with isolated cleft palate. All were managed by a multidisciplinary team. The median follow up was 4.3 years (0.9-5.2 years). There were 22 true unilateral and 26 bilateral clefts. Eleven patients (23%) had a cleft palate fistula. Of patients with true unilateral cleft palate, five had palatal fistula, five had nasal fistula and one had both. Two of the patients with bilateral cleft palate had a fistula and the other fistula was in the midline. The majority of patients had upper lateral segment cleft (29 of 31), alveolar cleft (19 of 31) and midline (11 of 31) clefts. Twenty-five patients had only one cleft lip, eight patients had two cleft lips, seven patients had three and one patient had four. The overall incidence of fistula was 25% and the incidence of fistula was higher with non-syndromic cleft palate (36%) than isolated cleft palate (13%). The results of this audit are comparable with the international literature. The multidisciplinary management approach has a positive impact on the treatment and outcomes of children with cleft palate.Virtual reality simulator for teaching robotic-assisted laparoscopic ureteroneocystostomy. To evaluate the feasibility of a virtual reality simulator for training surgeons in robotic-assisted laparoscopic ureteroneocystostomy. A virtual reality simulator for training surgeons in robotic-assisted laparoscopic ureteroneocystostomy was developed based on 3D reconstruction of a patient-derived computer model, and software simulations were carried out to evaluate the efficacy of the 2d92ce491b
