Calculating the total number of upvotes from the WordPress MySQL database I have a question about the WordPress MySQL database and a query to create. I want to know the total number of upvotes from a particular category that the post belongs to. The following is the query I am working on: `SELECT count(*) AS post_upvotes FROM wp_posts p INNER JOIN`

```
wp_term_relationships t
ON ( p.ID = t.object_id
AND
t.term_taxonomy_id = '2'
) INNER JOIN
wp_term_taxonomy tt
ON t.term_taxonomy_id
= tt.term_taxonomy_id
INNER JOIN
wp_term_relationships tr
ON tt.term_taxonomy_id
= tr.term_taxonomy_id
WHERE p.post_status =
'publish' AND
p.post_type = 'post' AND
tr.term_taxonomy_id =
'3' GROUP BY p.ID; I
```

have tried using
"tr.term_taxonomy_id" in
the WHERE clause, in
the JOIN, and in the
GROUP BY. None of
them seem to be working.
If anyone can offer any
help, it would be much
appreciated. A: Not a
good idea to put the
number of votes as a
column name - you will
get one-to-many FKs. Try
something like this:
SELECT p.*, t.count AS
posts_upvotes, tr.count
AS posts_downvotes

FROM wp_posts p JOIN
wp_term 2d92ce491b
