KMSAuto Net 1.5.4 full install setup Original RATIBUS-RATIBUS.INFO website link: RATIBUS-RATIBUS.INFOQ: XMLHttpRequest running in an iframe I am using XMLHttpRequest in an iframe. var xmlHttp = new XMLHttpRequest(); function do_post() { xmlHttp.open('POST', '', true); xmlHttp.send(username); xmlHttp.onreadystatechange = function() { if (xmlHttp.readyState === 4) { var data = xmlHttp.responseXML; alert(data); } } } I would like to have a function run when the readyState becomes 4. But, my problem is that the function is never called. I am able to get an alert when the request is finished. So, for some reason the data variable is always null. The username variable is being posted with the request. Thanks for any input. A: You cannot send data via XMLHttpRequest to a server that is on a different domain, as stated in this guide. In your case, you are making an AJAX request to a server that is located at a different domain (vs Check this one too, it might help you: JavaScript XmlHttpRequest - Cross-domain restrictions Yarn extraction is the process whereby yarn is removed from a spindle or rotary process during its spinning operations. Removal of the yarn from the spindle or rotary process is accomplished by a known take-off device, such as a cogged ring take-off. The take-off device is typically attached to the end of a drive shaft of the spindle or rotary process. Take-offs of the aforementioned type are typically provided with a rotary sleeve that has a plurality of radially spaced cogs. Each of the cogs, in turn, has a series of teeth that are inclined with respect to 2d92ce491b
