A: Download the trial version of SETI@home, or view the SETI in New Mexico website to see if you have any pings! To use a trial, in any web browser, go to Enter your email address in the login box. Once you log in, click on the link to download the SETI@home client. For help on the Web site, browse to If you ever want to try this again, please clear your Web browser's cache. Q: GeoCode search layer I am working on a project in silverlight that uses the Bing Maps API. I am very new to using the maps api so I'm probably doing something stupid here. I am trying to add a layer called locators from the search service and also add a search box to select a value from and then have the geocode function fire off. My problem is that the locators are not showing on the map when using that layer. I am just beginning to learn the maps api so I am probably missing something obvious, but I have looked through their documentation and have not seen anything related to this. Any suggestions or links to something that covers this would be greatly appreciated.
