Data Analyzer is a powerful software application that was designed in order to use features found in desktop and cloud-based analysis options. User friendly interface Data Analyzer's interface is rather easy to navigate, in fact, quite intuitive and friendly, especially considering its capabilities. The interface is comprised of three elements: the home page, the site map, and the panes. All of them are quite similar, so when you get the hang of the home screen, you can easily find the information you need in the content pane. The search engine offered by Data Analyzer is very useful as well, making it easy to locate the information you seek. However, if you need additional parameters, you can activate the search terms directly in the panel located in the bottom left corner of the interface. Import from the website The Import feature, offered by Data Analyzer, enables you to import "TXT files" from numerous online resources, including the main websites of online databases such as Credo, DSpace, EBSCOhost and Pluckler, various scientific journals and many other sites. If you notice that the imported data is not in the correct format, you can use the Repair Database feature, available on the Import/Export page. Save information to the hard drive Data Analyzer enables you to upload a document directly to the hard drive. You can find the local folder in which the program has saved the data in the "Information" tab. In a similar fashion, you can export the data that has been saved to the folder indicated by the "Save Data" button. Bottom line Data Analyzer is a straightforward and user-friendly piece of software. Its functionality is not limited to data collection; it is also quite useful for data classification and data presentation. Therefore, even if you are new to this type of software tool, you will quickly become accustomed to its use. Text analysis is the process of identifying the meanings of words, phrases, sentences and paragraphs within large volumes of text. These words and phrases are called "tokens". For example, a text analysis might find the word "tomato", because the author of the text used the word as an example of a vegetable. Similarly, a text analysis could use the word "tomato" to identify the other types of vegetables consumed in the text. The usefulness of text analysis is that it may be used to find things that you might not have thought about. Text analysis can be used to find text in images, for example, to find a picture of something you are looking for. Text analysis can also be used to find hidden messages in an email.
