Activate Photoshop Software on Your Mac The free version of Photoshop comes pre-installed on a new Mac. To open it, hold down the Option key and click the Adobe Photoshop icon in your Finder. That opens up Photoshop on your Mac. If you've ever used Photoshop before, this will feel familiar. If you've never used Photoshop on a Mac, it may be a bit overwhelming at first. But there is a lot to learn and explore, so we suggest starting with something a little easier to learn, like this introductory course. The first thing you'll notice is that it's split up into several areas. Select the area where you want to create or alter an image and then do so. To edit or create an image, navigate to the Layers dialog and click the New button. This is where you create new layers and edit existing layers. You can either create a new layer on top of an existing layer to create a separate area of the image, or you can create a new layer by clicking New in the Layers dialog box. Clicking new will create a new blank area where you can drag other elements to create a new layer. Simply click a layer in the Layers dialog box and click the Move tool in the top-right corner of the Layers dialog box to select the current layer and move it. Click the Command + [Delete] button to delete the current layer. You can also use the Option + Command + [Delete] keyboard shortcut to delete layers at once. Once you've created a layer, you can select it in the Layers dialog box and, using your mouse, click and drag the layer so it's no longer active and select an area of the image that is no longer part of the active layer. When you've finished altering the layer, you can click the square at the top-right corner of the layer to lock the layer in place. You can also double-click a layer to lock it in place for editing. A layer can contain multiple parts of the image, making it easy to duplicate portions of an image and adjust them separately. You can add many kinds of elements to a layer, including patterns, shapes, layers, and colors. You can also apply special effects to the layer or merge it with one or more other layers. You'll learn how to use these features more in the step-by-step image-editing tutorials on this page. In the Layers

Stimuli Responsive Non-Viral Gene Delivery: Toward Rational Design of Simple and Efficient Therapeutics. Gene therapy was first introduced to clinical practice over 30 years ago, and it is now the most promising medical treatment for patients with genetic diseases and cancers. Recently, non-viral gene delivery systems have been improved by novel materials, and these polymeric carriers have unique characteristics that could potentially be used for versatile biomedical applications. These new materials have high transfection efficiency, low cytotoxicity and low immunogenicity; however, they are usually considered to be simply a passive contrast agent. Herein, we describe stimuli responsive non-viral systems that are designed based on rational molecular biology approaches and new materials. Why will go ahead with a stealth action plan? MUMBAI: The year-long siege of Parliament House by the nationalist Sangh Parivar, its fringe and many state leaders, has unsettled the mind of the government, and especially of the Prime Minister, who is hoping to 'demolish' it in the just-concluded Budget session of Parliament. The ideology of Hindutva by its nature is opposed to parliamentary democracy and constitutionalism. If its 'savarna' mind-set and the agitations of fringe elements are not curbed, the PM will have no choice but to bury his hands in his trousers, close down Parliament and hide from world as the government would be swallowed up by the tide of a Lok Sabha with limited capacity to do anything. The opposition party-government relationship has gone sour. The BJP is not leaving anything to chance. The party is hoping the UPA government is facing difficulties in passing bills. But there are also two other reasons that should not be underestimated. Firstly, the UPA had led a weak coalition and its survival has depended on the support of smaller groups, be it the DMK, NCP or the JD (S). These parties have made significant advances to win some seats, and apart from fears of a Congress victory, there is a question mark over their future relationship with the UPA. The BJP is hoping that the Aam Aadmi Party (AAP) will pull down the AAP government in Delhi in May 2017. If this happens, it can take advantage of it and also the political space will be created for someone else. Secondly, the PM also wants to rule the nation through his own party as Narendra Modi is a man with many 'nephews' in
