What's New in the AeroSwitch?

AeroSwitch is a utility designed to help users switch between Aero and Classic UI styles when needed. This is helpful when users want to enjoy true Aero glass look and feel but need to use some Classic UI elements as well. This might be desirable if the user wants to enjoy

the transparency effects but at the same time needs to use older window functions for moving and resizing windows. This works as follows: - The main tool window includes classic controls such as move, resize, minimize, maximize and the like. - The main window is sized to fill the entire monitor, but can be docked or moved around, and is resizable too. - When you move the mouse pointer to one of the corners of the screen, a corner window appears, and you can click it to switch to Classic UI mode. - When you move the mouse pointer to the other corners of the screen, you get a center window instead. It has the same layout as the main window, and you can click it to switch to Aero UI mode. If you click on the wrong window by mistake, the program does the on the fly conversion. Bottom line AeroSwitch comes in handy when you need to switch between Aero and Classic

UI styles but want to use some elements from the Classic UI along with elements from the Aero UI. It's smart and works as expected, though it has just a couple of default saved configurations and doesn't offer the possibility to make your own.
