There's a simple

function that I want to apply a custom style to, but that's only one of its problems: `\f@nospace`
`\renewcommand{\baselinestretch}{0.5} \begin{document} ewcommand{\f}[1]{\fbox{\scriptsize #1}} \f{test}`
`\renewcommand{\baselinestretch}{0.5} \f{test} \end{document}` As you can see the second one does not compile. If I remove
`\renewcommand{\baselinestretch}{0.5}` the first one compiles, but I need it, otherwise `\f{test}` will not work. This is because
the following is the content of `\f: \fbox{\scriptsize#1}` If `\renewcommand{\baselinestretch}{0.5}` is there, `\fbox` becomes `\`

What's New in the?

Fast save by directly rendering prints to PDFs: Save your drawings directly to PDF, without rendering to screen. This eliminates the need to render your drawings to the screen, which may lead to delays. (video: 1:20 min.) Interactive installation with interaction zones: Now you can easily place tools anywhere in your drawing. Create an interaction zone (also known as an "ink bib" in other software). Drag and drop commands to any of the zones and trigger action. (video: 1:48 min.) Save time by using the Build tab when inserting objects: Now you can quickly insert an object and build it (or add to an existing object) from the same tool. (video: 1:37 min.) More convenient version control: Better find, compare, and revert tools. Snap to option, revert changes, and switch to old versions. Sort versions in a view panel. (video: 1:16 min.) Improved snapping: Snapping is now more accurate and more customizable, so you can snap to points, areas, and path nodes, and place points to the nearest path or grid. Also, you can now assign a new default snapping to keep your drawing from changing. (video: 1:44 min.) More robust face snapping: Face snapping is more reliable, with auto-correction. Also, now you can select any of the face-selectable nodes for snapping to (even if they are off screen), and select the exact snapping point for no tolerances. (video: 1:28 min.) Improved auto-convert: Improvements to auto-convert for better accuracy and faster performance. (video: 1:43 min.) 3D printing now available from paper models: More accurate and faster loading from paper, so it takes the same amount of time to create a drawing on screen as it does to print it from paper. (video: 1:35 min.) Faster and more accurate when editing meshes: More accurate and more responsive to user interactions. Also, you can now edit with live updates on exported meshes, even if you edited it last time you exported it. (video: 1:19 min.) Simplify your drawing faster with tools such as the Select, Draw, and Navigate tool: Drawing commands now work faster
