. Alâ?â?â?Abd al-Rahman ibn Awf. Â· Teixeira da Silva, Rodrigo Salgueiro. Online through the Netherlands' public transport network and opened in 2014, the Rijnmondring is a 42.5km long cycle track which runs along the water meadows of the IJsselmeer. Visible day and night from the Netherlands (and the world), this landmark has become a symbol of the nature of the Netherlands. It also means taking advantage of the fact that it is a partially flat and largely straight route, that offers a great alternative to cyclists to motor vehicle traffic. The original idea for the "Rijnmondring" came from Tielman Coerver, a member of the cycling committee, who wanted to create an attractive network of cycle paths along the water meadows of the IJsselmeer.

The experiment proved to be a success, with a great number of cyclists who took advantage of the city-like environment. Biosecurity strategies to control the spread of avian influenza in veterinary practice: a case study of commercial poultry farms in Italy. This study aimed to identify biosecurity, and more precisely, biosecurity measures to be implemented in practices. The study was performed on a sample of poultry farmers using an online survey consisting of 29 questions. The geographical location and the different practices and species were matched to the agricultural region of Italy. Farmers in northern Italy had the highest number of poultry farms (67.1%) and of tons of eggs produced per farm (44.0%). In northern Italy, the farm average was 45.4 animals per farm, while in the central and southern part of the country, average number of animals was 9.8 and 11.8 respectively. Most (79.4%) farmers considered the amount of vaccination expenses as the main risk of avian influenza H5N1 in their practices, and monthly sales were reported to be the highest risk for the vaccination status (51.0%). The category 'vaccine strategy' was considered the most appropriate to raise awareness of the Italian poultry farmers in relation to H5N1. Most of the farmers (76.4%) used various categories of vaccination, either on-site or from veterinary pharmacy, but none of the farmers used the 'vaccine strategy' during control and prevention of H5N1. The effect of each risk factor on H5N1-related
