First of all, I would like to say that I think that this program is a great program, I used it and it works. It is very simple and does exactly what it says it does. I got a problem when using the program, the problem is that I wanted to download the latest

version of the program and I clicked the link that I should be redirected, but the program did not download the version of the program and I have tried all the download links I could find. But nothing worked. If someone can help me please respond. I just downloaded and installed IEeCacheExplorer it works fine, i

dont even think I am clearing my temp files, i have done the manual ways before and it is a lot slower than this, so as far as speed I dont think its worth the money. The first thing I did was download the trial version, Ive used it a couple of times without a problem. The problem is that when I purchase the full version, and I run it the first

time, it does not seem to have deleted anything. In the help/support it says that it will look at your current IE cache and remove any IE cache files that have been created within the last 24 hours, and it has not done this for me. Ive restarted the PC but it seems to do nothing. Any suggestions? I have used this

program with my Windows 7 Professional x64 PC. I have looked at the help/support as well and it says that you need to run the free version of the program and it will detect and delete any cookies, history, temporary internet files and other items that IE has created. The problem is that I have looked at the help/support and it says to install
