

All databases need to be updated by March 18th or my WP blog will be . last summer on how to move from ClearDB to Azure DB for MySQL. I recently found out that my WordPress blog has issues that need to be fixed in order to improve the database experience. When testing the code, I noticed that some rows in the database are not strings (they are mostly strings with spaces). So I decided to create another WordPress blog theme and copy the code into the new theme. Then I wanted to create a new database and I noticed that all the codes in the database code were working fine, but the code that should be in the database was not.
