Suside Description Editor with node.js, GraphQL, react and TypeScript support. Open source! The app comes with a vibrant community and developers who are always happy to help. One of the best features about Suside is the fact that it keeps all the possibilities of a versatile code editor, but lends itself a modern style of life. Its interface comes with a few features that allow the user to create more precise, and yet, intuitive works. Where Suside differs from any other text editor is that it provides an option for the users to open up a terminal window and execute actions within it. Thanks to the autocompletion feature that it includes, the code that the users write with the app is actually made available to them instantly. Having a terminal window only gives the capability of performing actions that aren't necessarily based on the mere coding of code, but rather, you can take actions that are inspired by the one that a developer performs within the terminal. This is one of the most prominent aspects of Suside because it lends itself to be used in a variety of ways. What makes it possible for the user

You can revert to a previous version of the document, and use undo if you make a mistake. You can use these functions without a lot of effort.

You can save a version of your text when it is being edited, which you can save and then reopen. You can also toggle between the normal editor and the Terminal view. The bad Not great for full screen editing as you cannot move the content. You can't use the command line to do anything. You have to use a text input box for that. You have to change a lot of default settings just to get reasonable behavior. In fact, the terminal view is pretty much the default. I can't easily map keyboard shortcuts to actions. It is a lot slower than the other two editors. I don't think it is a fair comparison but I wanted to include it just in case it will convince you to look at the other two editors. You can't easily change the text color. I don't think I have ever used a text editor that made the text color as easy as just setting it on a web site.
