Selecting an area to be used as a copy reference is called cloning. You can use the Clone Stamp to both magnify areas of the image that you want to copy (by positioning it in the area of the image you want to copy) or you can reduce the size of an area (by positioning it on a small area in the image).

These brushes can be purchased as separate items (some are free) or as part of an image collection. If you are new to using brushes, or for tips on using the Clone Stamp tool, we have a beginner's guide

There are many types of brushes available within Photoshop. Below are just a few of the more common ones and their uses. Soft round brushes These are used for vignetting, airbrush and dust spray effects. The airbrush is a brush that resembles an airbrush used by illustrators and graphic designers. It can be used to show various types of depth effects by erasing, or "washing" details in an image. Here is a section of an image,

where I had shot some product boxes. The box on the left was photographed with a flash and was very bright. I wanted to make the box on the right appear more subtle. To do this, I used a soft round brush with the Gradient tool and set the brush opacity to about 50 percent. I positioned the brush about an inch from the edge of the box and painted over the bright side of the box. Tip: To zoom in or out on the canvas, use the scroll bars on either side of the image window. Alternatively, you can use the Zoom tool to zoom in on specific areas. Dust spray is an effect in which a soft round brush is used to apply glitter, dust and powdered material to a subject. For example, you might paint glitter on a subject's eye, nose, mouth, etc. to make the subject appear more 3-D. The Soft Round Brush can create a vignette or "shadow" effect in areas of an image by darkening parts of an image. It is used most often in vignetting (darkening all of the background and exposing the subject in the foreground) or in its inverse, to create a shadow effect. A vignette or "shadow" effect is created by darkening the
