Photoshop has dominated the professional image editing market for years. There have been several attempts to create Photoshop alternatives in the past, but all failed. In November 2012, Pixelmator became the first standalone editor to successfully compete with Photoshop. Its popularity has steadily grown and the number of

downloads has grown to more than one million. Lightroom and other Photoshop alternatives are available in the app store. Although Adobe currently controls the vast majority of the market, other editors have seen considerable success. Nowadays most software companies use specialized editors like Lumo or Adobe's own software to create images. As a result, the battle over Photoshop is over. Photoshop is still extremely popular. Not only is it still the standard for image editing, it's also the most frequently used photo editing software. According to Canalsys, professional users account for just under 80% of sales of image editing software. This makes it one of the most popular programs in the entire app store. Adobe Photoshop is installed on nearly all new laptops and desktops. Which one is better for beginners? Lightroom is also an extremely powerful image editing tool and it's easy to use. It's similar to other editors and has been criticized in the past, but these issues have mostly been resolved and the editing software is updated quite frequently. Unlike Photoshop, however, Lightroom doesn't have a ton of features. It's actually very similar to the popular image editing app Camera+ which is available on both Apple and Android. For professionals, the Photoshop app is more advanced and offers better photo editing options, but for beginners, Lightroom is a great alternative. The cost is also slightly better with Lightroom. It starts at \$149.99, but you can get a limited version for \$69.99. The editor is less advanced than Photoshop, but for beginners and photographers who don't need a ton of features, Lightroom is a good option. Lightroom is also ideal for video editors. Both apps are equally as powerful and offer similar video editing features. If you're an average photographer, Lightroom will probably work just fine. On the other hand, if you're a video editor, Lightroom is better if you need to work on photos along with videos. If you're looking for a light version of Photoshop and don't need a

Barriers and enablers to implementing the first national work-related musculoskeletal injury prevention and management guidelines: results from a survey of Australian health service managers. To identify barriers and enablers to implementing prevention guidelines for musculoskeletal disorders (MSDs) in the workplace. A cross-sectional web-based survey was conducted between July and September 2009. The sample consisted of health service managers (n=276) working for government organisations and non-government organisations in Australia. The response rate was 43%. Most respondents were female (66%) with a mean age of 46.7 years and a mean work experience of 11.3 years. Overall, 91% of respondents supported the guidelines and 73% were confident they could be implemented. Self-efficacy and organisational support were significant predictors of the endorsement of the guidelines. The most significant barriers to implementing the guidelines were accessibility and convenience. The major enablers were availability of leadership support and information for managers to assist their staff. This study identified barriers and enablers to implementing an MSD prevention guideline. Important barriers included that the guidelines were not available in the region and that the guidelines were not convenient for application. Key enablers to implementation included support from a manager and leadership and information about prevention and management practices. This study provides direction for the implementation of the guideline and demonstrates the need for continued policy and support.Q:

Returning a value outside of try..catch statement throws null pointer exception I have something like this in a function of a class: public int foo(String s){ try{ return (int) Double.parseDouble(s); }catch(NumberFormatException e){ return 0; } } Calling this function after setting return 0 will throw a NullPointerException as the value is null. Is there a way to return the value 0 without returning null? A: You could return 0; from the catch block. It doesn't need to be in the try block of course, but it will be required as the end of the try/catch. Or, as akita put it in a comment, don't return null but null. A: This is not an answer to your question, but I have to say: I'm sad to say that this kind of "security" is not

More than 800 wildfires scorched parts of the United States on Saturday, with blazes across 10 Western states causing evacuations and evacuees sleeping in the open, motel rooms, and high school gymnasiums. Six major fires were burning in Western states, according to the National Interagency Fire Center in Boise, Idaho, the main authority on the issue. While none of the infernos is the worst fire season on record, the new fires add to an already dangerous crisis for firefighter and American public.

The fires were in California, Oregon, Nevada, Utah, Idaho, Montana, South Dakota, Wyoming and New Mexico, according to a tally kept by the Northern California Wildfires Information System, run by the nonprofit group the Daily Climate, and the National Interagency Fire Center. At least 30 other fires burned across the country. Also on Saturday, the National Park Service said it had about 1,600 people in emergency camps, which are temporary residences for evacuees; that figure had more than doubled since Friday. The Washington Post reported that as of Saturday afternoon, there were 876 people in such camps, including at least 1,076 people in one such camp at the Glacier National Park in Montana. Many of the evacuees reported that they were sleeping in their cars, and in the open. A 65-year-old man told the Post he and his dog were sleeping in a car parked by a road that leads to the Great Smoky Mountains National Park in eastern Tennessee, about a two-and-a-half-hour drive from the park itself. In a statement on Saturday afternoon, the Great Smoky Mountains National Park said that there were no closures and that people were welcome to return to their homes. The statement added that the park office and most ranger stations were open, and that the park would report on its conditions and any changes to the statement in the coming days. There are also temporary shelters in motels in Portland, Oregon, and other nearby cities, including Pendleton, which is about 37 miles away from a state campground that is closed because of a wildfire. Some evacuees were living in their cars, and in a parking lot at the high school gym in Garden City, where the high school is temporarily open as a shelter. Nina LeVor, a graduate student from Oregon, reported hearing about 40 evacuees, the majority of them from the Hood River area, which was burned by last week's outbreak
